Subject: Building Update - August 29, 2008

As you may have noticed, DGS has built a containment near the Security Guard Station on the first floor. DGS informs us that they will work over the weekend on this project, with completion anticipated next week. Clearance testing will be completed by our consultants prior to the containment being removed.

DGS tells us work also continues on floors 22, 23 and 24.

Indoor Air Quality reports and other reports related to mitigation, remediation and clearance continue to be received from our Consultant, Hygiene Tech and DGS' consultant, BioMax. As those reports are sent to us, they are posted to the recently enhanced Building Assessment website. To view these documents go to [450 N Street Indoor Air Testing and Report Log](#) and the [Mediation, Remediation, and Clearance Page](#).
